

# CELEBRATING SUSTAINABILITY: GLOBAL EARTH DAY & ARBOR DAY EFFORTS

Cooper Standard's global facilities recently celebrated Earth Day by encouraging sites to participate in environmental activities and share their experiences.

The outstanding response included many sustainability-focused activities across more than 45 global Cooper Standard locations. From community restoration and conservation activities to fun, eco-themed contests like tomato growing challenges, Cooper Standard teams brought creativity and purpose to this initiative. Remarkably, the total effort will result in more than 2,800 trees or seedlings planted in the communities Cooper Standard employees live and work. These efforts reflect the Company's global mission to operate responsibly and sustainably, driven by the passion of its people at every level.

Further underscoring the Company's progress, Cooper Standard was recently named one of [America's Climate Leaders of 2025](#), a proud recognition of its ongoing efforts to reduce emissions and invest in a brighter future.

With powerful momentum and a growing culture of environmental stewardship, Cooper Standard looks forward to expanding these efforts year after year.
